

OUTSTANDING PERFORMANCE AT ALL TIMES WITHOUT HUMAN INTERVENTION

Accurate camera tracking is a fundamental process for realistic virtual studio and augmented reality productions.

With a **full 360-degree range of movement**, you gain free mobility within any virtual or conventional studio, enabling you to produce the most realistic virtual studio and augmented reality productions.

NO LIMITS AND COMPLETE FLEXIBILITY

Our tracking systems can be used with multiple cameras. They are easy to setup with a fast control balance and support multi-function uses.

With a robust and high-quality alloy aluminum structure, it is precise and powerful, yet extremely silent.

FULLY INTEROPERABLE

The system can be easily integrated with multiple AR technologies and can be deployed in an unlimited environment size, indoors or outdoors. It also controls an almost unlimited number of robotic devices (video cameras, spotlights, etc.) and allows several presenters to be followed simultaneously.

ADAPTABLE TO EVERY BUDGET AND ENVIRONMENT

We provide tracking systems with encoder, as well as optical tracking so you can choose the best match for your budget.

It can be adapted to multiple environments including classrooms, boardrooms, churches, or ad-hoc meeting/event locations, all without requiring dedicated camera operators.
